## Teriparatide Products

Policy # 00239

Original Effective Date: 01/01/2010

Current Effective Date: 11/11/2024

*Applies to all products administered or underwritten by Blue Cross and Blue Shield of Louisiana and its subsidiary, HMO Louisiana, Inc. (collectively referred to as the "Company"), unless otherwise provided in the applicable contract. Medical technology is constantly evolving, and we reserve the right to review and update Medical Policy periodically.*

*Note: abaloparatide (Tymlos™) is addressed separately in medical policy 00573.*

## When Services May Be Eligible for Coverage

*Coverage for eligible medical treatments or procedures, drugs, devices or biological products may be provided only if:*

- *Benefits are available in the member's contract/certificate, and*
- *Medical necessity criteria and guidelines are met.*

### **Postmenopausal Women with Osteoporosis**

Based on review of available data, the Company may consider the use of teriparatide (Forteo®, branded Teriparatide, generics)‡ for the treatment of osteoporosis in postmenopausal women to be **eligible for coverage.\*\***

### **Patient Selection Criteria**

Coverage eligibility will be considered for the treatment of osteoporosis with teriparatide (Forteo, branded Teriparatide, generics) when the following criteria are met:

- Patient is a postmenopausal woman who meets ONE of the following diagnostic criteria for osteoporosis:
  - Presence of a central dual x-ray absorptiometry (DXA) bone mineral density (BMD) T-score less than or equal to -2.5 confirming osteoporosis, OR
  - Patient has experienced a fragility fracture [defined as a major osteoporotic fracture, sustained as a result of a low-level trauma (e.g., a fall from standing height or less) that is associated with low BMD, including vertebral (spine), hip, forearm (wrist/distal radius), and proximal humerus (shoulder) fractures]; OR
  - Patient has a BMD T-score between -1.0 and -2.5 with an increased fracture risk (defined as a fracture risk assessment tool [FRAX®]‡ 10-year probability of major osteoporotic fracture  $\geq 20\%$  or 10-year probability of hip fracture  $\geq 3\%$ ); AND

Policy # 00239

Original Effective Date: 01/01/2010

Current Effective Date: 11/11/2024

- Patient has not been on Forteo (or another parathyroid hormone product, e.g., branded Teriparatide, generic teriparatide, or abaloparatide [Tymlos™]†) for more than 2 years of cumulative therapy; AND  
*(Note: This specific patient selection criterion is an additional Company requirement for coverage eligibility and will be denied as not medically necessary\*\* if not met).*
- Patient has or has had one of the following:
  - An inability to take bisphosphonates; OR
  - A 12-month trial of bisphosphonates with documentation of new fractures or significant loss of bone mineral density; OR
  - Patient has experienced a fracture within the past 12 months; OR
  - Patient has a history of multiple fractures; OR
  - Patient has a T score less than -3.0; OR
  - Patient is at high risk of falls or has a history of falls; OR
  - Patient has a FRAX 10-year probability of major osteoporotic fracture >30%; OR
  - Patient has a FRAX 10-year probability of hip fracture >4.5%; AND*(Note: These specific patient selection criteria are additional Company requirements for coverage eligibility and will be denied as not medically necessary\*\* if not met).*
- Patient has tried and failed (e.g., intolerance or inadequate response) Tymlos unless there is clinical evidence or patient history that suggests Tymlos will be ineffective or cause an adverse reaction to the patient; AND  
*(Note: This specific patient selection criterion is an additional Company requirement for coverage eligibility and will be denied as not medically necessary\*\* if not met).*
- If the request is for brand Forteo or brand Teriparatide, patient has tried and failed (e.g., intolerance or inadequate response) GENERIC teriparatide unless there is clinical evidence or patient history that suggests GENERIC teriparatide will be ineffective or cause an adverse reaction to the patient.  
*(Note: This specific patient selection criterion is an additional Company requirement for coverage eligibility and will be denied as not medically necessary\*\* if not met).*

Current Effective Date: 11/11/2024

## **Men with Primary or Hypogonadal Osteoporosis**

Based on review of available data, the Company may consider the use of teriparatide (Forteo, branded Teriparatide, generics) for the treatment of men with primary or hypogonadal osteoporosis to be **eligible for coverage.\*\***

### Patient Selection Criteria

Coverage eligibility will be considered for the treatment of men with primary or hypogonadal osteoporosis with teriparatide (Forteo, branded Teriparatide, generics) when the following criteria are met:

- Patient is a male who meets ONE of the following diagnostic criteria for osteoporosis:
  - Presence of a central dual x-ray absorptiometry (DXA) bone mineral density (BMD) T-score less than or equal to -2.5 confirming osteoporosis, OR
  - Patient has experienced a fragility fracture [defined as a major osteoporotic fracture, sustained as a result of a low-level trauma (e.g., a fall from standing height or less) that is associated with low BMD, including vertebral (spine), hip, forearm (wrist/distal radius), and proximal humerus (shoulder) fractures]; OR
  - Patient has a BMD T-score between -1.0 and -2.5 with an increased fracture risk (defined as a FRAX 10-year probability of major osteoporotic fracture  $\geq 20\%$  or 10-year probability of hip fracture  $\geq 3\%$ ); AND
- Patient has not been on Forteo or another parathyroid hormone product (e.g., branded Teriparatide, generic teriparatide, or abaloparatide [Tymlos]) for more than 2 years of cumulative therapy; AND  
*(Note: This specific patient selection criterion is an additional Company requirement for coverage eligibility and will be denied as not medically necessary\*\* if not met).*
- Patient has or has had one of the following:
  - An inability to take bisphosphonates; OR
  - A 12-month trial of bisphosphonates with documentation of new fractures or significant loss of bone mineral density; OR
  - Patient has experienced a fracture within the past 12 months; OR
  - Patient has a history of multiple fractures; OR
  - Patient has a T score less than -3.0; OR
  - Patient is at high risk of falls or has a history of falls; OR
  - Patient has a FRAX 10-year probability of major osteoporotic fracture  $>30\%$ ; OR
  - Patient has a FRAX 10-year probability of hip fracture  $>4.5\%$ ; AND

*(Note: These specific patient selection criteria are additional Company requirements for coverage eligibility and will be denied as not medically necessary\*\* if not met).*

- Patient has tried and failed (e.g., intolerance or inadequate response) Tymlos unless there is clinical evidence or patient history that suggests Tymlos will be ineffective or cause an adverse reaction to the patient; AND

*(Note: This specific patient selection criterion is an additional Company requirement for coverage eligibility and will be denied as not medically necessary\*\* if not met).*

- If the request is for brand Forteo or brand Teriparatide, patient has tried and failed (e.g., intolerance or inadequate response) GENERIC teriparatide unless there is clinical evidence or patient history that suggests GENERIC teriparatide will be ineffective or cause an adverse reaction to the patient.

*(Note: This specific patient selection criterion is an additional Company requirement for coverage eligibility and will be denied as not medically necessary\*\* if not met).*

### **Glucocorticoid Induced Osteoporosis**

Based on review of available data, the Company may consider the use of teriparatide (Forteo, branded Teriparatide, generics) for the treatment of men and women with glucocorticoid induced osteoporosis to be **eligible for coverage.\*\***

### **Patient Selection Criteria**

Coverage eligibility will be considered for the treatment of patients with glucocorticoid induced osteoporosis with teriparatide (Forteo, branded Teriparatide, generics) when the following criteria are met:

- Patient has been on chronic systemic glucocorticoid therapy for at least 12 months; AND
- Patient meets ONE of the following diagnostic criteria for osteoporosis:
  - Presence of a central dual x-ray absorptiometry (DXA) bone mineral density (BMD) T-score less than or equal to -2.5 confirming osteoporosis, OR
  - Patient has experienced a fragility fracture [defined as a major osteoporotic fracture, sustained as a result of a low-level trauma (e.g., a fall from standing height or less) that is associated with low BMD, including vertebral (spine), hip, forearm (wrist/distal radius), and proximal humerus (shoulder) fractures]; OR
  - Patient has a BMD T-score between -1.0 and -2.5 with an increased fracture risk (defined as a FRAX 10-year probability of major osteoporotic fracture  $\geq 20\%$  or 10-year probability of hip fracture  $\geq 3\%$ ; AND

## When Services Are Considered Not Medically Necessary

Based on review of available data, the Company considers the use of teriparatide (Forteo, branded Teriparatide, generics) when the following criteria are NOT met to be **not medically necessary**.\*\*

- Patient has not been on Forteo or another parathyroid hormone product for more than 2 years of cumulative therapy
- Patient has an inability to take oral bisphosphonates; OR
- Patient has a 12-month trial of oral bisphosphonates with documentation of new fractures or significant loss of bone mineral density; OR
- Patient has experienced a fracture within the past 12 months; OR
- Patient has a history of multiple fractures; OR
- Patient has a T-score less than -3.0; OR
- Patient is at high risk of falls or has a history of falls; OR
- Patient has a FRAX 10-year probability of major osteoporotic fracture >30%; OR
- Patient has a FRAX 10-year probability of hip fracture >4.5%; AND
- Patient has tried and failed Tymlos.

Based on review of available data, the Company considers the use of brand Forteo or brand Teriparatide when the patient has not tried and failed GENERIC teriparatide to be **not medically necessary**.\*\*

## When Services Are Considered Investigational

*Coverage is not available for investigational medical treatments or procedures, drugs, devices or biological products.*

Based on review of available data, the Company considers the use of teriparatide (Forteo, branded Teriparatide, generics) when patient selection criteria are not met to be **investigational**\* (except for those denoted as **not medically necessary**\*\*)

Based on review of available data, the Company considers the use of teriparatide (Forteo, branded Teriparatide, generics) when used for indications other than those approved by the U.S. FDA to be **investigational**.\*

Teriparatide Products

Policy # 00239

Original Effective Date: 01/01/2010

Current Effective Date: 11/11/2024

## **Background/Overview**

Teriparatide (Forteo, branded Teriparatide, generics) contains recombinant human parathyroid hormone. Parathyroid hormone regulates bone metabolism, renal tubular reabsorption of calcium and phosphate, and intestinal calcium absorption. These actions stimulate new bone formation on trabecular and cortical bone surfaces by preferential stimulation of osteoblastic activity over osteoclastic activity. Teriparatide has the same mechanism as abaloparatide (Tymlos) and both of these products are typically reserved for patients at very high risk for fractures or who cannot tolerate oral therapy. These two products have not been compared to each other in clinical trials, so no claims of superiority can be made. Additionally, the FDA package insert indicates that the use of Forteo for more than 2 years during a patient's lifetime should only be considered if a patient remains at or has returned to having a high risk for fracture.

Osteoporosis is characterized by decreased bone mass and increased fracture risk, most commonly at the spine, hip and wrist. DXA scans of patients with osteoporosis reveal a T-score less than or equal to -2.5. In addition to those patients with a DXA score representing osteoporosis, treatment should be considered in those patients with a fragility fracture (regardless of T-score) or a T-score between -1.0 and -2.5 with an increased fracture risk using the FRAX score. A fragility fracture is a major osteoporotic fracture, sustained as a result of a low-level trauma (e.g., a fall from standing height or less) that is associated with low BMD, including vertebral (spine), hip, forearm (wrist/distal radius), and proximal humerus (shoulder) fractures. The fracture risk assessment tool (FRAX) estimates the 10-year probability of hip fracture and major osteoporotic fracture (hip, clinical spine, proximal humerus, or forearm) in untreated patients aged 40 to 90 years using easily obtainable clinical risk factors for fracture and femoral neck BMD when available. The data used by the FRAX was collected in large, prospective, observational studies across world regions. The tool has been validated in approximately 26 independent cohorts, and its country-specific prediction algorithms are available for many countries online. The United States FRAX can be accessed at <https://frax.shef.ac.uk/FRAX/tool.aspx?country=9>.

# Louisiana

Teriparatide Products

Policy # 00239

Original Effective Date: 01/01/2010

Current Effective Date: 11/11/2024

While osteoporosis occurs in both men and women, it is most common among women following menopause. In healthy humans, bone formation and resorption are closely linked; old bone is resorbed and replaced by newly formed bone. In postmenopausal osteoporosis, bone resorption exceeds bone formation, leading to bone loss and increased risk of fracture. After menopause, the risk of fractures of the spine and hip increases; approximately 40% of 50-year old women will experience an osteoporosis-related fracture during their remaining lifetimes.

## **FDA or Other Governmental Regulatory Approval**

### **U.S. Food and Drug Administration (FDA)**

Forteo was approved for the treatment of postmenopausal osteoporosis and for men with primary or hypogonadal osteoporosis in late 2002. Forteo gained approval for the treatment of glucocorticoid induced osteoporosis in mid-2009.

## **Rationale/Source**

This medical policy was developed through consideration of peer-reviewed medical literature generally recognized by the relevant medical community, U.S. Food and Drug Administration approval status, nationally accepted standards of medical practice and accepted standards of medical practice in this community, technology evaluation centers, reference to federal regulations, other plan medical policies, and accredited national guidelines.

The safety and efficacy of once-daily Forteo, median exposure of 19 months, were examined in a double-blind, multicenter, placebo-controlled clinical study of 1,637 postmenopausal women with osteoporosis (Forteo 20 mcg, n = 541). All women received 1000 mg of calcium and at least 400 IU of vitamin D per day. Baseline and endpoint spinal radiographs were evaluated using the semiquantitative scoring. Ninety percent of the women in the study had one or more radiographically diagnosed vertebral fractures at baseline. The primary efficacy endpoint was the occurrence of new radiographically diagnosed vertebral fractures defined as changes in the height of previously undeformed vertebrae. Such fractures are not necessarily symptomatic. Forteo, when taken with calcium and vitamin D and compared with calcium and vitamin D alone, reduced the risk of 1 or more new vertebral fractures from 14.3% of women in the placebo group to 5.0% in the Forteo group. This difference was statistically significant ( $p < 0.001$ ); the absolute reduction in risk was 9.3% and the relative reduction was 65%. Forteo was effective in reducing the risk for vertebral fractures regardless of age, baseline rate of bone turnover, or baseline BMD. Forteo significantly

## Teriparatide Products

Policy # 00239

Original Effective Date: 01/01/2010

Current Effective Date: 11/11/2024

reduced the risk of any nonvertebral fracture from 5.5% in the placebo group to 2.6% in the Forteo group ( $p < 0.05$ ). The absolute reduction in risk was 2.9% and the relative reduction was 53%. The incidence of new nonvertebral fractures in the Forteo group compared with the placebo group was ankle/foot (0.2%, 0.7%), hip (0.2%, 0.7%), humerus (0.4%, 0.4%), pelvis (0%, 0.6%), ribs (0.6%, 0.9%), wrist (0.4%, 1.3%), and other sites (1.1%, 1.5%), respectively. Forteo increased lumbar spine BMD in postmenopausal women with osteoporosis. Statistically significant increases were seen at 3 months and continued throughout the treatment period. Postmenopausal women with osteoporosis who were treated with Forteo had statistically significant increases in BMD from baseline to endpoint at the lumbar spine, femoral neck, total hip, and total body. Forteo treatment increased lumbar spine BMD from baseline in 96% of postmenopausal women treated. Seventy-two percent of patients treated with Forteo achieved at least a 5% increase in spine BMD, and 44% gained 10% or more.

The safety and efficacy of once-daily Forteo, median exposure of 10 months, were examined in a double-blind, multicenter, placebo-controlled clinical study of 437 men with either primary (idiopathic) or hypogonadal osteoporosis (Forteo 20 mcg,  $n = 151$ ). All men received 1000 mg of calcium and at least 400 IU of vitamin D per day. The primary efficacy endpoint was change in lumbar spine BMD. Forteo increased lumbar spine BMD in men with primary or hypogonadal osteoporosis. Statistically significant increases were seen at three months and continued throughout the treatment period. Forteo was effective in increasing lumbar spine BMD regardless of age, baseline rate of bone turnover and baseline BMD. Forteo treatment for a median of ten months increased lumbar spine BMD from baseline in 94% of men treated. Fifty-three percent of patients treated with Forteo achieved at least a 5% increase in spine BMD, and 14% gained 10% or more. The efficacy of Forteo for treating glucocorticoid-induced osteoporosis was assessed in a randomized, double-blind, active-controlled trial of 428 patients (19% men, 81% women) aged 22 to 89 years (mean 57 years) treated with  $\geq 5$  mg/day prednisone or equivalent for a minimum of 3 months. The duration of the trial was 18 months with 214 patients exposed to Forteo. In the Forteo group, the baseline median glucocorticoid dose was 7.5 mg/day and the median duration of glucocorticoid use was 1.5 years. The mean standard deviation (SD) baseline lumbar spine BMD was  $0.85 \pm 0.13$  g/cm<sup>2</sup> and lumbar spine BMD T-score was  $-2.5 \pm 1$  (number of SDs below the mean BMD value for healthy adults). A total of 30% of patients had prevalent vertebral fracture(s) and 43% had prior non-vertebral fracture(s). The patients had chronic rheumatologic, respiratory or other diseases that required sustained glucocorticoid therapy. All patients received 1000 mg of calcium plus 800 IU of vitamin D supplementation per day. In patients with glucocorticoid-induced

osteoporosis, Forteo increased lumbar spine BMD compared with baseline at 3 months through 18 months of treatment. In patients treated with Forteo, the mean percent change in BMD from baseline to endpoint was 7.2% at the lumbar spine, 3.6% at the total hip and 3.7% at the femoral neck (p < 0.001 all sites). The relative treatment effects of Forteo were consistent in subgroups defined by gender, age, geographic region, body mass index, underlying disease, prevalent vertebral fracture, baseline glucocorticoid dose, prior bisphosphonate use and glucocorticoid discontinuation during trial.

Policy # 00239

Original Effective Date: 01/01/2010

Current Effective Date: 11/11/2024

\*Investigational – A medical treatment, procedure, drug, device, or biological product is Investigational if the effectiveness has not been clearly tested and it has not been incorporated into standard medical practice. Any determination we make that a medical treatment, procedure, drug, device, or biological product is Investigational will be based on a consideration of the following:

- A. Whether the medical treatment, procedure, drug, device, or biological product can be lawfully marketed without approval of the U.S. Food and Drug Administration (FDA) and whether such approval has been granted at the time the medical treatment, procedure, drug, device, or biological product is sought to be furnished; or
- B. Whether the medical treatment, procedure, drug, device, or biological product requires further studies or clinical trials to determine its maximum tolerated dose, toxicity, safety, effectiveness, or effectiveness as compared with the standard means of treatment or diagnosis, must improve health outcomes, according to the consensus of opinion among experts as shown by reliable evidence, including:
  1. Consultation with technology evaluation center(s);
  2. Credible scientific evidence published in peer-reviewed medical literature generally recognized by the relevant medical community; or
  3. Reference to federal regulations.

\*\*Medically Necessary (or “Medical Necessity”) - Health care services, treatment, procedures, equipment, drugs, devices, items or supplies that a Provider, exercising prudent clinical judgment, would provide to a patient for the purpose of preventing, evaluating, diagnosing or treating an illness, injury, disease or its symptoms, and that are:

- A. In accordance with nationally accepted standards of medical practice;
- B. Clinically appropriate, in terms of type, frequency, extent, level of care, site and duration, and considered effective for the patient's illness, injury or disease; and
- C. Not primarily for the personal comfort or convenience of the patient, physician or other health care provider, and not more costly than an alternative service or sequence of services at least as likely to produce equivalent therapeutic or diagnostic results as to the diagnosis or treatment of that patient's illness, injury or disease.

For these purposes, “nationally accepted standards of medical practice” means standards that are based on credible scientific evidence published in peer-reviewed medical literature generally recognized by the relevant medical community, Physician Specialty Society recommendations and the views of Physicians practicing in relevant clinical areas and any other relevant factors.

**NOTICE:** If the Patient's health insurance contract contains language that differs from the BCBSLA Medical Policy definition noted above, the definition in the health insurance contract will be relied upon for specific coverage determinations.

**NOTICE:** Medical Policies are scientific based opinions, provided solely for coverage and informational purposes. Medical Policies should not be construed to suggest that the Company recommends, advocates, requires, encourages, or discourages any particular treatment, procedure, or service, or any particular course of treatment, procedure, or service.

**NOTICE:** Federal and State law, as well as contract language, including definitions and specific contract provisions/exclusions, take precedence over Medical Policy and must be considered first in determining eligibility for coverage.
